

AISIN, USA

Seymour, Indiana

Fink Roberts & Petrie, Inc. provided both structural and site design services for this manufacturing facility for AISIN USA to fabricate auto parts for various compact cars. The facility was built in phases.

Phase I consisted of 31,000 square feet of single story office space and 120,000 square feet of single story (high bay) manufacturing space.

Phase II consisted of adding another 120,000 square feet of manufacturing space.

This facility has the following special features: jib cranes, roof supported underhung bridge cranes, column supported top running bridge cranes, press machines, loading docks, piping and cable tray yard arbors, concrete pits, tanks, and trenches for special process requirements, and an interior courtyard in the office area.
